Professional Summary

Unity Developer with 4+ years of commercial experience building 2D and 3D games and interactive applications across mobile, desktop, WebGL, VR, and XR. Hands-on experience in gameplay programming, Unity/C# architecture, game physics and mathematics, animation, VFX, asset integration, performance optimization, and cross-platform deployment.

Experienced in building real-time multiplayer prototypes with Photon Fusion, integrating third-party SDKs, creating Unity Editor tools, and taking features through the full development cycle from concept to release. Also worked closely with game designers to evaluate technical feasibility, scope solutions, and identify opportunities for reuse. Coordinated engineering work, reviewed technical solutions, and mentored developers while remaining actively involved in implementation.

Technical Skills

Core Development: Unity, C#, 2D/3D Gameplay, OOP, SOLID, Design Patterns, DI, Zenject, UniTask, UniRx, Event-driven Architecture

PC & Multiplayer: Windows, macOS, WebGL, Photon Fusion, RPC, Networked Gameplay, Player Lifecycle, Lobby Systems, Cross-platform Input

Gameplay & Physics: Projectile and Ballistic Systems, Target Acquisition, Graph-based AI, Procedural Placement, Raycasts, Collisions, Knockback, Rigidbody Physics, Vectors, Angles, Quaternions

Animation & VFX: Animator Controllers and Overrides, Layers, Blend Trees, Animation Events, Ragdolls, DOTween with UniTask, Particle Systems, 2D/3D and UI Effects

Graphics & Assets: Shader Graph (Depth-based Outlines, Animated Emissive Effects), Materials, URP, Baked/Real-time Lighting, Post-processing, FBX/Texture/Animation Import, Rigs and Avatars, Compression, Sprite Atlases

Content & Tools: Addressables, Asset Bundles, Unity Editor Tools, Custom Inspectors, Import Presets, Photoshop; Basic Blender for Mesh/UV Inspection, Polygon Review, and Transform Cleanup

Optimization & SDKs: Unity Profiler, Frame Debugger, Memory and Build Optimization, Appodeal, GameAnalytics, Firebase Remote Config, Unity IAP

Workflow: Git, Git Flow, Code Review, Refactoring, Build Pipelines, Release Preparation, Sprint Planning, Cross-functional Collaboration

Professional Experience

TapTap Studio

March 2025 – May 2026

Unity Developer / Technical Lead — Mafia Stories: Idle Tycoon

- Developed core gameplay and meta-game systems for a 3D F2P title, including progression, economy, combat, UI flows, data-driven content, and reusable project infrastructure.
- Created a ragdoll-driven robbery game mode in which characters picked up and carried objects, reacted to accumulated weight, lost balance, and interacted physically with the environment.
- Migrated a legacy codebase to Zenject, UniTask, UniRx, and Addressables, improving maintainability and supporting faster feature development.
- Integrated Appodeal, GameAnalytics, Firebase Remote Config, Unity IAP, and related production services for the Google Play soft launch.
- Reduced build size from approximately 250 MB to 120 MB, loading time from around 30 seconds to 12 seconds, and improved low-end performance from approximately 15 FPS to 30 FPS.
- Created Unity Editor tools and asset workflows for models, textures, animations, rigs, materials, compression, and platform-specific content optimization.
- Coordinated a four-person programming team, planned sprint workload, reviewed technical solutions, and aligned implementation with game design, art, QA, and production.

Bear Head Studio**September 2023 – February 2025***Team Lead / Unity Developer — Inhumans Inc.*

- Designed and implemented core gameplay and application architecture for a 3D management and leadership training game delivered to a B2B customer.
- Built interconnected room, production, storage, logistics, contract, economy, progression, save/load, and telemetry systems with data-driven configuration.
- Developed and integrated more than 15 UI windows and optimized rendering and UI rebuilds, increasing average performance from approximately 90 FPS to 125 FPS.
- Led weekly planning and technical reviews, maintained the repository and build workflow, supported developers, and prepared technical assignments for interns.
- Delivered the product on schedule after customer feedback cycles with no critical issues at handoff.

Bear Head Studio**March 2022 – August 2023***Unity Developer — Kingdom & Castles*

- Developed the “Architectural Works” mini-game, implemented a new game mode, and created audio, display, and localization settings.
- Ported the project to Android and macOS, adapted its UI and controls, and improved average performance by 37%.
- Prepared production builds and released the product on Google Play.

Bear Head Studio**September 2021 – February 2022***Unity/C# Mentor — BHS Summer School*

- Mentored approximately 20 students through gameplay implementation, weekly code reviews, technical consultations, and the full prototype-to-release cycle.
- Helped eight graduates complete and publish their projects on Itch.io.

Selected Personal Project**The Binding of Bashka****2026***Unity Developer — 2D Real-time Multiplayer Gameplay Prototype*

- Developed the project from scratch as a cross-platform PC/Android multiplayer prototype with Photon Fusion, including room creation and joining, network spawning, player lifecycle handling, and synchronized gameplay.
- Built reusable character movement, graph-based enemy AI, distance-based target acquisition, projectile combat, experience, upgrade, and runtime stat systems with keyboard and mobile controls.
- Structured the project around dependency injection and decoupled gameplay interfaces to support both local and network-controlled characters.

Education**HSE University****2026**

Master’s Degree — Internet of Things and Cyber-Physical Systems

HSE University**2024**

Bachelor’s Degree — Computer Science and Engineering

Languages**Ukrainian:** Native — **English:** C1 — Advanced — **Russian:** C1 — Advanced
